| Solvent | 45.5% n-Propanol  
           19.5% n-Butyl Acetate |

**Key Features and Benefits**

- Excellent lamination bond strengths in adhesive / extrusion laminations
- Excellent adhesion to various flexible packaging substrates including coated and treated polypropylene, coated and treated polyester, PVDC coated cellophane, polyethylene and nylon
- Excellent resolubility / printability
- Fast solvent release
- Very low solvent retention
- No tack for increased block resistance
- Maintains flexibility at very low temperatures
- Excellent UV light stability

**F.D.A. Status**

Although there is no section directly referring to non food contact inks, reference can be made to other sections of the F.D.A. The composition of KF 8631 conforms to the positive list of the American F.D.A. regulations, Chapter 21, Section 175-105 for laminating adhesives, where the ingredients are separated from the food by a functional barrier.

**E.E.C. Status**

The individual monomers used in the manufacture of KF 8631 are listed in the Plastics Directive, Section 1, Part1, ‘Authorized Monomers.’

**REACH Status**

All reactants are REACH pre-registered and as directed to be registered. We have as needed joined the required SIEF’s for the reactant. Our only European representative is Info-Care.

**Additional Data**
